Sitesassure Is The Most Comprehensive Security Suite Of Tools Available For Any PHP Based Website

Notifications

You should never be the last to know the status of your website. Receive detailed daily email reports from our multiple scanners.

Security Suite

Manage your website's security with our multi-faceted anti-hacking, anti-virus and security suite of tools. All accessed from your Sitesassure user account.

Multiple Website Scans

No single scanner can detect every possible intrusion. Sitesassure provides multiple levels of automated and manual website scanners with detailed daily reports.

File Manager

This suite includes a file manager for quick and simple access to manage, edit, clean and modify your files on the root level. There is no need for FTP or cPanel.

Server Uptime Status

Know if your website is offline. We ping your website daily and show your online status within your easy to understand Sitesassure dashboard.

Software Firewall

Our anti-hacker firewall uses LAYER 1 signature-based detection system, and LAYER 2 pattern-based Instruction Detection System for added protection.

Disaster Recovery

Dependent on your selected plan, Sitesassure will clean and restore your infected or hacked website as part of your subscription plan, NO EXTRA CHARGE!

Free Hosting

Through our exclusive partnership with top tier INMOTION HOSTING, receive discounts or free hosting depending on your plan.

Simple Dashboard

Easy to use with no installation required, your dashboard allows for a single point of access to your comprehensive security suite's individual functions.
